Utah County
HEART of UTAH

Health Department

Annual

2016

Report

FROM THE EXECUTIVE DIRECTOR

Dear Utah County Residents and Community Leaders,

During the summer of 2016, the Health Department responded to a toxic algal bloom in Utah Lake that was unprecedented in size and scope. Past algal blooms had generally been limited to smaller harbor type areas on the lake. This bloom was massive and required the closure of the entire lake for weeks due to the risk to the public's health. The effort required coordination with over 20 partner agencies. This event created massive media attention, including national media, with coverage for much of the summer. Toxic algal blooms in the lakes commonly called Payson Lakes also required cautionary and closure action by the Department.

For many years now, in cooperation with the Utah County Solid Waste Districts, the Utah County Health Department has sponsored a Household Hazardous Waste Collection day where residents can bring in their household hazardous wastes to be recycled where possible or safely disposed of when recycling or reuse is not possible. In 2016 the Utah County Board of Health passed a regulation that will allow this effort to continue and even expand in the coming year. The intent was to establish collection sites at the area transfer stations where much of this waste can be taken year-round for proper handling without a charge to the resident disposing of the waste.

The year 2016 brought the world the Summer Olympic Games in Brazil. Due to an outbreak of the Zika virus in Brazil and other areas, alerts were issue about the disease with the largest concern being for the babies born to infected mothers. Microcephaly in infants has been connected to the Zika virus infection in pregnant women. While the virus is not currently in the mosquito populations here in Utah, we did end up with the responsibility to track cases of individuals with the Zika virus coming into the state from the areas where the Zika virus was present. This is important for tracking health outcomes for infants from infected mothers as well as possible cases that come from sexual transmission as it has been shown the virus can be transmitted sexually. With the addition of the Zika virus tracking to our workload, we are now responsible for tracking and doing the epidemiological investigations on 84 different communicable diseases.

Our county continues to be rated as a very healthy community. The Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute gather annual county health rankings though a collaborative effort (see www.countyhealthrankings.com). Utah County is currently ranked as the 3rd healthiest county in the state and the only heavily urbanized county with a population over 125,000 in the top three in the state. Utah County rated number one for Health Behaviors, number two for Quality of Life, number three for both Health Outcomes and Health Factors, and number four for Social and Economic Factors.

It requires the effort of all citizens to keep Utah County a healthy place to live and grow. We appreciate so very much the support of our County Commission, the Board of Health, involved citizens and community leaders, as well as our very outstanding employees.

Sincerely,
Ralph L. Clegg, EHS, MPA
Executive Director
Utah County Health Department

Ralph Clegg
Executive Director

ADMINISTRATION

Utah Lake Algal Bloom Response

An algal bloom in Utah Lake, unprecedented in size and scope requiring Utah County Health Department, along with the Utah Department of Health to close the entire lake, which had never been done previously, in order to protect the health of the public. The algal bloom required a tremendous response from department staff over the course of several months.

American Fork/ Tibble Fork Response

Utah County Health Department staff coordinated with partnering agencies in responding to the Tibble Fork Reservoir Sediment Release. UCHD assured the development and posting of accurate signage to notify recreators of heavy metals in the sediment in the creek.

Response to Multiple, Concurrent Urgent Issues

Multiple concurrent urgent issues during the summer required significant staff multi tasking. Issues responded to included:
*Algal Bloom in Utah Lake
*Tibble Fork Reservoir Sediment Release
*Hantavirus Death
*Zika virus in a Pregnant Woman
*Multiple Rabid Bats

Groundbreaking of New Multi-Service Health Clinic

Ground was broke on a new multi-service health clinic in Payson. Immunizations and Women, Infants and Children (WIC), will be provided, in addition to other health services.

Strategic Plan Approval & Implementation

The five-year strategic plan developed through community and partner input was approved and implemented. Plan objectives reflect the highest priority issues and offer opportunities for measurement and accountability. Approximately 32% of the plan has been completed as of February 1, 2017.

Intern Volunteer Hours Nearly Double 2015

Volunteer hours (not including those of senior volunteers) donated to the Utah County Health Department = 8, 235, equaling four full time employees, with a contribution of $196,981 Hours for 2016 are nearly double that of 2015.

UTAH LAKE ALGAL BLOOM

Media Coverage

July 22nd

NBC Nightly News with Lester Holt
July 24 at 12:35pm ·

A huge toxic algae bloom in Utah has closed one of the largest freshwater lakes west of the Mississippi River, sickening more than 100 people and leaving farmers scrambling for clean water.

Toxic Algae Closes Utah Lake, Sickens 100

The bacteria commonly known as blue-green algae has spread rapidly to cover almost all of 150- square-mile Utah Lake, turning the water bright green.

FRIENDS OF PUBLIC HEALTH

Since 1995, when the first full week of April was declared National Public Health Week (NPHW), communities across the United States have observed NPHW as a time to highlight issues important to improving the health of the public.

As part of NPHW, Utah County Health Department and the Board of Health traditionally honor one individual and one organization for their efforts and dedication to the health and welfare of the citizens of Utah County. The 2016 honorees are Deanne Francis and the Brigham Young University Department of Health Science Department.

Deanne Franics

Commisioners Graves, Ellertson, Lee, Deanne Fracis and Ralph Clegg

The Utah County Health Department and Utah County Board of Health would like to recognize Deanne Francis with our "Friend of Public Health Award" for her many years of dedicated and energetic service to the health of the residents of Utah County. A few of her numerous accomplishments include being the first prenatal educator in Utah County and the first advocate in Utah for getting fathers into the delivery room. She worked in the NICU for over 40 years, including many years serving as the Lactation Services Coordinator and as a member of the Intermountain Healthcare Corporate Lactation Standards Committee.

Deanne has also served as:

- Nursing Director for Utah County Volunteer Medical Care Outpatient Clinic.
- Medical Advisory Board for Utah March of Dimes
- Family Support Center Advisory Board
- Member of three Missionary Medical Advisory Committees in Pharmacy/Nutrition, Public Health, and Correlation for the LDS Church.
- For the last 8 years, she has served as the Chair of the Nurse Health Specialist Committee for the LDS Church. Oversee nursing committee responsible for maintaining contact with 300 nurses world-wise who are caring for 80,000 young and senior missionaries, many of whom are Utah residents.
- She has taught with her husband in Venezuela at 5 medical schools for the LDS Church Welfare Department.
- She has served humanitarian missions to 7 nations.
- Member of task force to open milk bank in Utah (Mountain West Mother's Milk Bank). Was very instrumental in getting a human milk bank established in Utah.
- Developed protocol for use of pasteurized human milk for gastric priming and the grant to cover the cost for four years. To show her dedication to the cause she even purchased, out of her own pocket, the first pasteurized human milk used in Utah County.
- Developed a power point presentation for insurance companies and was instrumental in getting insurance coverage for breast pumps and pasteurized human milk for hospitalized infants.

In 2008 Deanne received the Utah Perinatal Association for Outstanding Service to Women and Newborns. In 2015 she received the Guardian Angel Award from Intermountain Healthcare.

For these efforts and many more, we are honored to recognize Deanne Frances with our Friend of Public Health Award for 2016.

BYU - Department of Health Science

Commisioners Graves, Ellertson, Lee, Rosemary Thackeray, and Ralph Clegg

The Utah County Health Department and Utah County Board of The Utah County Health Department and Utah County Board of Health recognizes the Brigham Young University Department of Health Science of with the "Friend of Public Health Award" for their many years of support of public health efforts in Utah County.

The BYU Health Science program has a long history of providing substantial support to the Health Department through committed, dedicated collaborative efforts. Professors provide professional development workshops to staff, graduate students provide valuable evaluation and analysis of programs and services. Undergraduate students devote thousands of productive hours as interns.

Graduate students meet with staff annually to review, plan and create evaluations for programs. They have suggested improvements for asthma, air quality, physical fitness, tobacco cessation, and injury prevention; suggestions that save valuable staff time. One project studied was the Baby Steps program, which helps pregnant women and their partners quit smoking.

Through collaboration with BYU, the program was able to innovate and make technological advances, allowing for improvements in program implementation, significantly increasing outreach to the target population and paving the way for others to do the same. In the Baby Steps program, where efforts directly affect the number of healthy babies being born, advances like these have a curative effect that will touch the lives of many as the program continues.

By understanding participants' views regarding program strengths and weaknesses, Baby Steps program staff can further tailor an already successful program to better meet the needs of Utah County's pregnant and postpartum women desiring smoking cessation services.

Graduate student work proved invaluable to the Utah Tobacco Free Alliance. All first year students conducted Health Impact Assessments geared toward the 2016 legislative session and tobacco cessation efforts. Students also met with individuals with opposing views. Information provided in assessments was extremely beneficial. Results were utilized to educate the policy leaders in our community.

We are honored to recognize Brigham Young University's Department of Health Science with our "Friend of Public Health Award" for the past support and look forward to a long relationship going forward.
